Short(er) but powerful (M300)

A suitable, handy mobile fence

The M300 fitting element is a pre-galvanised temporary fencing piece that connects to an M300 series temporary fencing line. The adjusted width of 2.20 metres ensures this temporary fencing fits your temporary fencing line. This is also an ideal solution in situations that require narrower transport means. These fitting elements can be bundled and transported in our plastic transport stillage. It also catches less wind because the temporary fencing is narrower than the standard 3.50 metres. The many ways in which this fence can be used means it is the perfect addition to your stock.

- Attractively priced
- Fits your fence line

Stable, durable mobile fence that is very quick to set up

The mesh of this pre-galvanised temporary fencing has no sharp zinc residues, making this temporary fencing safe for the hands. This temporary fencing can be erected easily by one man. We recommend using the Heras Fence Carrier when the fencing is being set up by 1 person. A custom sign visible on both sides of the fence line can be fitted.

Mobile fence with a strong frame

In addition to this narrow variant, this type of temporary fencing is also available in a basic version and with additional options. For example, the fence can be made with welded corners. The stronger corner joint extends the service life considerably. A horizontal centre tube is recommended if the fences must be transported horizontally and/or loading/unloading your truck must be done by hand. We always recommend using a Heras fence coupler to connect the fences. This temporary fencing is also available as standard with a hook or hook and eye connection for a quick fence line installation. Do you have any other wishes? Contact our employees; they will be happy to help you.
