Easy-to-handle concrete footings for installing Heras temporary fencing

Ideal for fitting the anti-lift system

These footings can be handled by 1 person. Because they are smaller than traditional concrete and plastic fence blocks, the tripping hazard is limited. However, the footings retain the advantage of the robustness of a concrete footing. These concrete footings are made of reinforced concrete and are an accessible solution for installing temporary fencing. Generally, the fences are placed in the middle of the footing. However, there are also holes on the outer edge of the footing. Placing the fences here limits the risk of passers-by being tripped. The square holes in the footing are ideal for fitting the anti-lift system, or when poles are driven through the footings for maximum stability.

- Limited trip hazard
- Easy to handle
