Footings of superior quality and optimal ease of use

Fast, easy and light to process

The Heras temporary fencing footing is made from recycled plastic and weighs less than 24 kg. This is below the legal maximum in the European Union. This means it can be handled and put in place by 1 person. The plastic fence block is around 40% lighter than a concrete footing, but the sophisticated design means it can act as a very stable foundation. This makes it the most stable plastic fence block available. It is with good reason that Heras uses this temporary fencing footing in its own rental park.

- Easily stackable
- With forklift cut-outs
- Fast, easy and light to process
- Indestructible

Dependable durability.

The plastic fence blocks are made of suitable recyclable plastic. The plastic is fused into a robust footing so it remains beautiful and representative. The design ensures the footing is perfectly stackable. The forklift cut-outs make loading and unloading a simple job.
