Highly visible plastic fence blocks to complete the Heras 151 System

Yellow fence blocks for increased safety

The only enclosed cased feet in the UK. So no hassle with covers that are always lost or broken. We are increasingly building in public space. This means that we have to take our environment into account even more; local residents, passers-by. And it means even more security measures in a more limited space. How do you prevent pedestrians from tripping over your work? The Heras Mobile HV151 high visibility base ensures that construction fences only form a barrier and not an obstacle.

- Fully high visibility
- Meets all the guidelines contained within HSG151
- High quality safety with the desired stability

Fence blocks for high wind areas

In high wind areas, the blocks can be combined with the stepblock ballast weight and the stepblock strut for maximum stability and safety.

Part of Heras HSG 151 System.

Our High Visibility feet are part of the Heras HSG 151 System. The HSG151 publication by the Health and Safety Executive entitled "Protecting the Public – Your next move" gives plenty of advice to help you conform to legislation. HSE guidelines that help protect the public are a major consideration when it comes to construction site safety. It's your responsibility to ensure that there are no risks posed to your staff or the public. The Heras 151 Panel System meets all the guidelines contained within HSG151 and we are pleased to say that the HSE has confirmed this system meets their standards. The Heras 151 Panel System is available on a hire or sale basis for collection or delivery across the UK.
