## For installing Heras mobile fences on concrete road separation barriers

### GBA - For assembly of Heras mobile fences on concrete road separation barriers

This bracket can be used to fit Heras temporary fencing to roadblockers during road works in which the crash barrier has been replaced by roadblockers. Concrete roadblockers guide traffic while work is carried out on (high-speed) roads. For extra safety, 1-metre high temporary fencing is fitted to these concrete structures. This is easily possible with a guardrail support. The temporary fencing is attached after fitting the guardrail support on the roadblockers. We recommend connecting the temporary fencing with a Heras fence clip. In order to obscure the view of the works and to prevent dirt from blowing onto the road, we recommend attaching Fencenet to this temporary fencing.

- Easy to assemble
- Work can continue undisturbed
