## Save space with fences on paved surfaces

### When posts cannot be driven into the ground

This semi-permanent solution consists of temporary fencing connected to posts with Heras fence clips. If the posts cannot be driven into the ground, this construction is an excellent solution. Drill the plate into the hardened surface using anchors. This ensures sturdy and vandal-proof security. Footings and Heras fence stabilisers are not necessary, saving you space. Semi-permanent construction site security offers several advantages. A tight perimeter communicates order and tidiness. The welded steel mesh in our temporary fencing can be used several times, a simple mesh fence only once. Gates are easy to fit.

- Semi-permanent set-up
- Ideal on paved surfaces
