A heavy duty traffic and pedestrian separation barrier

Highly visible safety system to segregate pedestrians and increase traffic control

The Bull Barrier is a temporary heavy duty traffic and pedestrian separation barrier. This barrier is designed for roadworks where moving vehicles are in close proximity to the temporary site perimeter and its operatives. The system has the advantage of being used with Heras temporary fences to keep the public safe, but can also be used as a single stand alone barrier to delineate a construction site or work areas. Due to its innovative design and unrivalled effectiveness, the barrier improves public safety whilst being very cost-effective.

- Flexible to fit to corners
- Fast and easy installation
- Wind resistant

Quick and easy to install

The Bull Barrier is characterised by the hinge and slot connection method. This method helps make installation a much faster process compared to comparable products. Installation is not labour-intensive and requires only two people.
