Wind-permeable banner

Fabric allows the wind to pass through

The Fencenet is a wind-permeable banner from Heras that prevents dirt (dust, debris) reaching the public space from your construction site. This type of wind-permeable banner partially obscures the view of your construction site (contours remain visible). A Fencenet provides 55% darkening. The wind load is lower compared to traditional temporary fencing tarpaulin. The large number of rings on the outer edge of the Heras Fencenet and the structure of the weave make it less vulnerable to strong winds and sharp objects. Cleanliness and appearance is guaranteed. Available on 5-metre rolls and loose, 3.5 metres wide. One roll is sufficient for screening more than 14 temporary fencing pieces (3.5 m per fence).

- Obstructing vision
- Stops dirt

Wind cloth to partition road works

The Heras wind-permeable banner is often used for road works. Especially when working alongside the road. Traffic will not be hindered by the blown up dirt or distracted by the work taking place. Employees can continue working undisturbed and will be less bothered by wind and sun. Heras wind-permeable banners fit on 2-metre high temporary fencing. It is also possible to fit them on 1-metre high temporary fencing placed on concrete roadblockers next to the road. Contact us for advice and options at your location.
