Strut with integrated base plate and a welded-on ground sleeve

Ensures even easier installation

This strut with integrated base plate and a welded-on ground sleeve ensures even easier installation. The strut is attached between two construction fence panels by a coupler. The foot plate can be locked to the ground with a ground nail, ground spike or dowels. Should this not be possible, so there is the further possibility to weigh it down by means of concrete or recycling feet as a counterweight. The extra welded ground sleeve prevents the feet from slipping off the plate.

- Professional appearance
- Straight construction fence line
- With Pin
