Semi-permanent construction site security offers several advantages.

Semi-permanent construction site security offers several advantages.

The semi-permanent solution consists of Heras temporary fencing that is connected to posts using High Security Heras fence clips. The posts are driven about 1 metre into the ground. The Heras fencing elements are then attached to the posts using 4 Heras fence clips. Footings and Heras fence stabilisers can therefore be replaced by the Ø60 posts, which saves space. A tight perimeter communicates order and tidiness. Welded steel mesh temporary fencing can be used several times, a simple mesh fence only once. Gates are easy to fit. This is a flexible solution that can be used on any project. You can use your own fences or rent them.

- Save space
- Neat appearance
- Reusable temporary fencing
