To create extra stability in the Bull Barrier line

Bull Barrier allows for the simultaneous use of a re-enforcement bar

To ensure that the Bull Barrier line delivers its full crash-tested rating a re-enforcement bar is required. This can be fitted along the traffic facing side to interlock each section further. This bar does not prevent you from using any top mesh panels. The re-enforcement bar comes complete with 'L' section plates and is 3 metres long, spanning two Bull Barriers. You may not need the re-enforcement bar if you are using these barriers in areas with a slower speed limit.

- A stronger Bull Barrier line
- Recommended for areas subject to hard driving
